## SECTION 2: TECHNOLOGY READINESS LEVEL (TRL)

|                                              |                                                                                         |
|----------------------------------------------|-----------------------------------------------------------------------------------------|
| <b>TRL 1 – Basic Research</b>                |                                                                                         |
| ✓                                            | Scientific observations are made and documented.                                        |
| ✓                                            | Basic principles or phenomena related to the technology are understood.                 |
| ✓                                            | No specific use or product has been defined yet.                                        |
| <b>TRL 2 – Concept Formulation</b>           |                                                                                         |
| ✓                                            | Possible applications of technology are proposed.                                       |
| ✓                                            | The concept is based on research but remains theoretical.                               |
| ✓                                            | No experiments or testing have been done yet.                                           |
| <b>TRL 3 – Proof of Concept</b>              |                                                                                         |
| ✓                                            | The technology concept is tested through analysis or small-scale lab experiments.       |
| ✓                                            | Early results suggest the idea is feasible.                                             |
| ✓                                            | Key assumptions and technical risks are identified.                                     |
| <b>TRL 4 – Lab Validation</b>                |                                                                                         |
| ✓                                            | Individual components of the technology are built and tested in the lab.                |
| ✓                                            | Components are integrated to show they work together.                                   |
| ✓                                            | Testing happens in a controlled lab environment.                                        |
| <b>TRL 5 – Simulated Environment Testing</b> |                                                                                         |
| ✓                                            | Components are tested in conditions that simulate the real world.                       |
| ✓                                            | The system includes supporting technologies (e.g., sensors, interfaces).                |
| ✓                                            | Results show improved performance and reliability.                                      |
| <b>TRL 6 – Prototype Demonstration</b>       |                                                                                         |
| ✓                                            | A prototype system is built and tested in a real-world-like environment.                |
| ✓                                            | The prototype performs the intended function.                                           |
| ✓                                            | Most technical uncertainties have been addressed.                                       |
| <b>TRL 7 – Operational Demo</b>              |                                                                                         |
| ✓                                            | A near-final system is demonstrated in the actual environment where it will be used.    |
| ✓                                            | The prototype is tested under real operational conditions (e.g., on-site, field tests). |
| ✓                                            | The technology behaves as expected in real-world use.                                   |
| <b>TRL 8 – System Ready for Use</b>          |                                                                                         |
| ✓                                            | The full system is built and qualified.                                                 |
| ✓                                            | All features and functions are tested and verified.                                     |
| ✓                                            | System performance meets expected standards under real conditions.                      |
| <b>TRL 9 – Fully Deployed</b>                |                                                                                         |
| ✓                                            | The system is used in real operations with actual users.                                |
| ✓                                            | The technology performs reliably and consistently.                                      |
| ✓                                            | Product is ready for full commercial use or production.                                 |
